

ACUSERA 24.7

INTERLABORATORY DATA MANAGEMENT

Acusera 24.7 is a live, cloud based interlaboratory data management and peer group reporting software intended to assist in the management of daily QC activities.

Designed to complement our range of Acusera true third party controls, 24.7 can speed up data review and troubleshooting procedures for smarter QC data management.

Acusera 24.7 Benefits

Advanced statistical analysis

Automatically calculating advanced statistics including %Bias, Total Error and Sigma Metrics helps enhance performance assessment, improve QC strategy, and meet regulatory requirements.

Comprehensive reports

Comprehensive, easy-to-read and customisable reports have been designed to speed up the review process and include Statistical Metrics, Uncertainty of Measurement, Exception, Audit Trail & more.

Highly flexible to meet individual laboratory needs

Labs can configure their own performance limits, multi-rules, consensus groups and target values for each instrument or lot of QC.

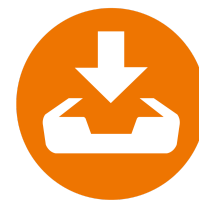

Peer Group Statistics

Updated live in real-time, labs can compare statistics to their peers and identify any unique or widespread issues to help reduce time and money spent on troubleshooting.

Fully interactive charts

Ability to compare performance, assess trends and monitor performance with automatically generated Levey-Jennings, Histograms and Performance Summary Charts.

Automated data import via Acusera 24•7 Connect

Upload QC data directly to Acusera 24•7 via LIMS and middleware. This automated function eliminates the need for manual data entry and helps save money whilst increasing efficiency.
