INFECTIOUS DISEASE CONTROLS

THIRD PARTY, MULTI-MARKER CONTROLS
DESIGNED TO DELIVER ACCURATE & RELIABLE RESULTS

BENEFITS

Our Acusera Infectious Disease (Serology) Controls are designed to deliver a cost effective, high quality solution for the analysis of infectious diseases whilst producing trustworthy results time and time again. Covering a wide range of infectious diseases, including HIV, Hepatitis, EBV, ToRCH, and Lyme Disease, our controls are compatible for use on some of the most popular immunoassay platforms including Roche, Abbott, Siemens and Beckman among others.

Liquid ready-to-use

- All samples are provided in a user-friendly, liquid ready-to-use format significantly reducing preparation time and the risk of pipetting errors.

Commutability

- Manufactured from human plasma each control is designed to react to the test system in the same manner as the patient sample, helping to meet ISO 15189:2012 requirements.

True third party controls

- Designed to deliver an independent, unbiased assessment of performance with any instrument or method the Acusera range will help to meet ISO 15189:2012 requirements and eliminate the need for multiple instrument specific controls.

Reduced waste

- With a working stability of 60 days at 2°C to 8°C waste and costs are kept to a minimum.

Consolidation

- The availability of multi-marker controls will reduce the number of individual controls required ultimately reducing costs, time and storage space.

Clinically relevant

- Designed to challenge clinically relevant ranges our low reactive samples will ensure accurate and reliable instrument performance.

Acusera 24•7

- Our Acusera Infectious Disease (Serology) Controls are compatible for use with our interlaboratory data management software Acusera 24•7.

INFECTIOUS DISEASE CONTROLS

Lyme Disease (*Borrelia burgdorferi*)

Lyme Disease is an infectious disease caused by the bacterium *Borrelia burgdorferi* and spread by ticks.

Our control delivers a true third-party solution for the detection of Lyme Disease on most immunoassay analysers. All samples are conveniently supplied in a user-friendly, liquid ready-to-use format.

Analytes

Borrelia burgdorferi IgG | *Borrelia burgdorferi* IgM

Description	Size	Cat. No.	Benefits
Lyme Disease Negative Control	1 x 5 ml	SR10345	<ul style="list-style-type: none">• Liquid ready-to-use• 100% human serum• Open vial stability of 60 days at 2°C to 8°C• Suitable for use with most immunoassay analysers
Lyme Disease Positive Control	1 x 5 ml	SR10346	

ToRCH

ToRCH is most commonly associated with congenital anomalies caused by a variety of pathogens including *Treponema pallidum* (syphilis), Varicella Zoster Virus, Rubella, and Cytomegalovirus. Most ToRCH infections cause mild maternal morbidity but can have serious consequences on the foetus.

Our ToRCH portfolio includes positive controls for both IgG and IgM antibodies in addition to a negative control. Each control is manufactured using human plasma and is suitable for use with most immunoassay analysers. The availability of liquid ready-to-use samples helps to reduce preparation time and the potential for human error.

INFECTIOUS DISEASE CONTROLS

Epstein Barr Virus (EBV)

EBV is an extremely common virus, spread primarily through saliva causing mononucleosis.

The Acusera EBV control is conveniently supplied liquid ready-to-use and is suitable for use with most immunoassay analysers.

Analytes

Epstein Barr Virus (EBV) EBNA IgG | Epstein Barr Virus (EBV) VCA IgG | Epstein Barr Virus (EBV) IgM

Description

- 100% human serum
- Open vial stability of 60 days at 2°C to 8°C
- Suitable for use with most immunoassay analysers

Serology

A range of positive and negative serology controls are available comprising various infectious diseases including HIV, Hepatitis, HTLV and Syphilis.

Acusera Serology controls are supplied liquid ready-to-use and are suitable for use on most immunoassay analysers.

Analytes - HBeAg Positive (RUO)
